Q3. Ã, Q9. As we evaluate the risk of land sliding from Nepal using Aphrodite, we believe that Aphrodite is one of the most important products to evaluate scientific and politically such issues. Q14. The AFRO Indian area (grill data) is the precipitation value of the registered dates. Ã, p14. A: For daily precipitation data providers, we will provide workshop materials, public data creation tools and results (0.05 degree grid not open to the public). During the APHRODITE-2 period (Three years project 2016 to March 2018), we focus on our target domain in the monitoring (MA) and only launching products for the 1998-2015. I would like to display the precipitation distribution on a specific day automatically, and create a tool â € â € œ â € â € œ â € â € œ Â € œThe the end of a day of Aphrodite data (V1101, v1801)? However, during this fiscal year (April 2019? A: Unfortunately, we can not accept this request at the moment, by the three reasons that follow. A: Aphrodite-1 is for â € œAvaluation The impact of global warming in the horric resources of SIA, Ã ¢ â € œ and we collect the maximum possible data, we have developed the expression of mountainous precipitation and we apply the same throughout the analysis period. I want to release the secondary product from data to Aphrodite: Contact the main investigator of the AFHRODITE project. The V1801 and V1901 algorithm that are made in Aphrodite-2 have been improved from so that they can be used to analyze extreme events. There are also losses by evaporation. In the update of APHRO_JP launched in July 2017 in order to avoid confusion, launch I love two types of time verses of the Japan and world-time version, and also included the EOD (end of the day). (2012).) You can use it for Reats where they do not There was a change in RSTN during the target period. We recommend that each person register (takes only 10 me me Because we can not reach all users if a responsible technician is transferred and / or a student that registered formed. Ã, P6. A: Unfortunately, you can not. I think the aprodite precipitation is low (underestimated) .a: exactly. This is true for V1101. This is our challenge. The evaluations of the risks of intense precipitation and the consequences of catstrophes caused by land mentures are inevitably important. Ã, Q11. 2. If you do not work for you, the registered person needs to provide all the email addresses of people who share the products in aphrodite.Precinfo "at" gmail.com so that we can give the information you need ¡Rias to all you. In the last three years, us, Aphrodite-2 team at the University of Hirosaki we work intensely about the Snow Question, since we have enough snow in winter and many students are interested in such a matter. >> Refer to the V1801_R1 Readme for an example of improvement in the 0.05 degree grid version. However, currently it is difficult because Afhrodite - 2 is run with very few members. 3. A: Depends on what types of extreme events. Ã, Q10. Therefore, we do not save the value of points. If you would like to request, once it will be a reference for the development of Aphrodite in the future, please contact Aphrodite.Precinfo Ã ¢ â € â € œThe inadequate publish The reference document has not been accepted. A: You can use it for limited areas. The public version is the result of grid data of 0.05 degrees obtained in this way to 0.25 degrees and 0.5 degrees. In V1801 and V1901, when the interpolated value of the 0.05 degree grid is calculated, it tries to preserve the value if there is a point in the grid of 0.05 degree. However, we can not release the 0.05 degree product. Ã, Q12. In addition, in a CQ objective applied by APHRO, the data that exceeded a certain statency value and, as a result of the comparison euq euq sosac setnatsab metsixe euq som¡Ätatsnoc ,etil©Ätas ed sodad so rehto ot derapmoc eb ro dedaolnwod Ã Ã ¢ Â or taht Ã ¢ Â Â Â Â Â Ã ¢ Ã Â ¢ Ã ¢ Â Â loot and etaerc ot dna, yllacitamotua yad cificeps and no noitubirtsid NoitatipicERP EHT YALPSID OT EKIL DLUW to? Q4. We submitted statistical analysis papers to show how AFRODITE products represent extreme rainfall characteristics. How can I access the original data (point data)? AFHRODITE does GTS data and unrestricted data in the same format. It is not limited to the analysis of extreme events, when you use AFRODITE, please pay attention to the rstn indicator that shows the data distribution for each day and make sure there is a precipitation gauge on the grid. EOD is Japan time 24, world time 15. Can I access the workshop materials? I would like to see source codes. Q15. If we allow data to be displayed and downloaded on a daily basis, it is likely to cause misuse, so we want to prevent these problems from happening. However, we use both the GTS data and the data with more stations that AFHRODITE has personally collected from each country. I think the AFRODITE precipitation is low (underestimated). A: If someone requests it and the data is provided, it can be done. P5. Ã Q5. Q11. We still use both data sets even in these cases. GTS data collected from Meteorological Agencies around the world is available from NOAA. Basically, you cannot use V1101 and V1101EX. Ã Q4. *In the grid, we estimate Ã¢â'¬Å"percentage Ã¢â'¬Â However, we can disclose if the developers at the time have allowed the source to be published, such as QC code. prohibit distribution to third parties. Ã P1. A: APHRODITE staff maintain a userâ¤?s e-mail address to provide errata, reference documents and product updates. P13. Ã Q2. What has been improved in AFRODITE-2 products? We have already conceived to mitigate the effect, but it is not necessary to pay attention to the enormous of the Area without observation data. Can I use Aphrodite for interannual µ and/or climate change? (2009) or Yatagai et al. However, as we made products APHRO_V1101 on Russia and the Middle East ©dio during Aphrodite-1 (five-year project from 2006 to 2010), we want to create products on Central , Russia and the Middle East ©dio, if there are cooperators. For now, only workshop participants can obtain the materials. Can I request a workshop to be held? For example, in we record the 24-hour precipitation at 8:30 a.m. (= world time 03 UTC). Q3. These work for undervaluation. Q7. * As a result of quality control, we sometimes find cases such as 10 times or 2.54 times different conversions of a thousand meters and inches) in the unit between two data sets. data sets.
